

## How to export the address of a property

The application manager has the possibility to export the address of a property to the website and associated portals

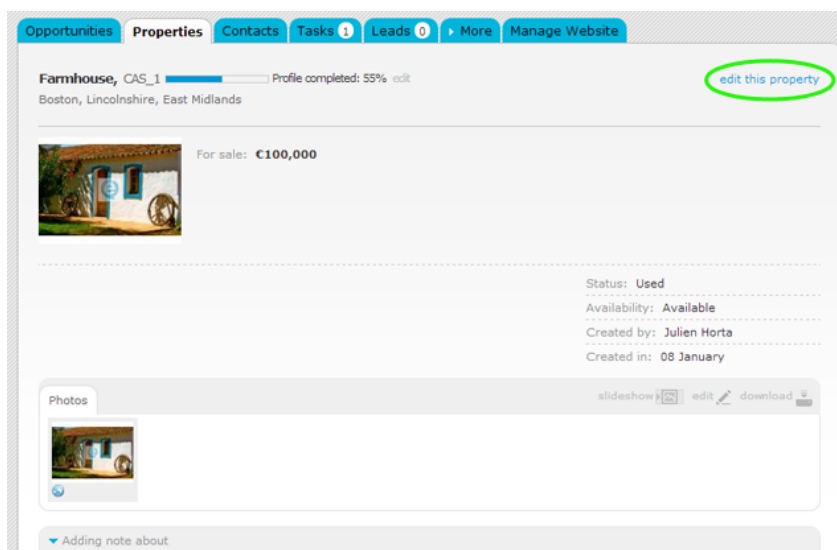

---

To do so, take the following steps:

1. Click the '**Properties**' tab;

2. Click on the property that you want to export the address to access the property details record and then click '**edit this property**';

3. In the **Location** section, write in the text box the **address** of the property;

The screenshot shows a web form titled "Location" with several dropdown menus and text input fields. The dropdowns are set to "United Kingdom", "East Midlands", "Lincolnshire", and "Boston". The "Address" field contains the text "London...". To the right of the form are two checkboxes: "Export address" and "Export georeference", both of which are currently unchecked. Below the form is a Google Map of London with a blue location pin. A tooltip above the pin displays the coordinates: "Lon: -0.127500000000006" and "Lat: 51.507222". A green circle highlights the "Address" text box.

4. To export the address to the Internet, select the '**Export address**' option. If this is not your intention, then do not select this option and just click '**Save property**';

This screenshot shows the same "Location" form as above, but with the "Export address" checkbox now checked. A green circle highlights this checked checkbox. The "Address" field still contains "London...". The map and other form elements remain the same as in the previous image.

5. When you choose to export the address to the internet, it will appear on your website in the details of the property.
